

App Name: HireMind AI

One-Line Pitch:

An AI-powered platform that analyzes resumes and portfolios, provides ATS optimization feedback, and helps students improve their chances of getting shortlisted for internships and software engineering roles.

Target User:

HireMind AI is designed for college students, fresh graduates, and aspiring software developers who are preparing for internships and job opportunities. Many candidates struggle with resume optimization, ATS compatibility, and identifying skill gaps. This platform helps users improve their resumes and portfolios using AI-driven insights and personalized recommendations.

Core Features:

- Resume Analyzer – Upload resumes and receive ATS scores, keyword analysis, and improvement suggestions.
- Portfolio Review – Analyze portfolio websites and receive feedback on UI, SEO, and content quality.
- Job Match Analysis – Compare resumes with job descriptions and identify missing skills.
- User Dashboard – Store previous reports and track improvement over time.
- Secure Authentication – Personalized accounts with protected user data.

AI Feature:

The Resume Analyzer and Portfolio Review modules will use the Gemini API to generate personalized feedback, ATS optimization suggestions, and skill-gap analysis. Gemini was selected because of its strong natural language understanding and easy integration with modern web applications.

Tech Stack:
